

SKILLS

AI & Workflow Orchestration: Microsoft Azure AI Foundry, LangChain, RAG Agents, Local LLMs
DevOps & Environments: Git, GitHub Actions, Docker, Azure (AI Projects, Containers, Blob storage, Key Vault)
Backend & Data Engineering: Java Spring Boot, Node.js, Python (Flask, FastAPI, uv), REST APIs, GraphQL
Frontend: React+Redux (hooks), TypeScript, JavaScript, HTML, Material UI
Databases & Telemetry: MongoDB (Motor/Aggregation), Vector DBs, SQL, Alteryx

EDUCATION

Bachelor of Technology in Computer Science and Engineering
Batch of 2021 - 2025
[PES University](#) Bengaluru, India
Selected coursework: DSA, OS, OO Analysis and Design, Data Science, Big Data, Computer Networks, Cloud, Blockchain

WORK EXPERIENCE

Software Engineer Full-time

07/2025 – Present

SDE Intern Internship

06/2024 – 12/2024

[DeepConnect Technologies Inc.](#) (AI-enabled B2B SaaS orchestrating alumni-driven GTM workflows with the product, **GoWarm**)

Hyderabad, India (Remote)

AI Engineering & Agentic Orchestration

- Architected and deployed an asynchronous, multi-agent revenue intelligence service using Python 3.11, FastAPI, and Azure AI Foundry to synthesize unstructured GTM signals (emails, meetings, transcripts) into structured CRM deal-health indicators.
- Engineered a multi-stage LLM orchestration pipeline that transitioned the system from flat classification to a stateful, rolling Parameter Knowledge Graph, introducing historical state tracking and change detection over time.
- Optimized system precision to 90+% while driving an order-of-magnitude increase in recall (from ~5% to a stable 55% range) via targeted hallucination controls and multi-signal evidence merging.
- Designed a hybrid deterministic-AI fallback matrix for complex entity resolution and participant auto-mapping, ensuring absolute data provenance back to original email and attendance streams, eliminating ungrounded AI context generation.

Systems Architecture & Integration Engineering

- Overhauled a volatile, sleep-prone browser client data acquisition pipeline into a resilient backend-coordinated, lease-based workflow, reducing an endemic 83% file-drop rate to under 5%.
- Implemented a stateless client instance fingerprinting layer dedicated strictly to background identity management (non-auth), successfully eliminating multi-instance race conditions and local storage state drift.
- Optimized data ingestion cycles by caching durable identity snapshots, preventing redundant endpoint traffic to target networks while seamlessly integrating trusted third-party enrichment APIs for data reinforcement.
- Full-Stack & Data Telemetry: Developed cross-stack features across a Java Spring Boot and Python Flask microservice mesh with a React/Redux client overlay, engineering a Kanban pipeline, an outreach enrichment engine, and 25+ MongoDB aggregation pipelines with optimized indexing for high-throughput data telemetry.

Seasonal Analyst Internship

01/2025 – 06/2025

[Goldman Sachs Group, Inc.](#) (Portfolio Control & Custody Reconciliations, Asset Management division)

Bengaluru, India

- Systems Architecture & Technical Handover:** Formulated engineering blueprints to automate complex Paydown & Interest (P&I) workflows, acting as the operational bridge between Core Engineering and Asset Management. Engineered a logic layer with 24 validation rules across 9 financial streams (e.g., Bloomberg, SWIFT), increasing efficiency by 33% and reclaiming 6 hours of daily overhead.
- Algorithmic Matching & Pipeline Automation:** Deployed scheduled Alteryx pipelines with dynamic tolerance thresholds and a human-in-the-loop (HIL) exception framework to resolve multi-currency FX breaks (MT300). Programmed best-effort cross-currency matching logic that successfully eliminated over 1,000 downstream pipeline breaks per month.
- Business Intelligence & Data Engineering:** Architected executive reporting canvases using Alteryx and optimized SQL to slice through multi-million row transaction datasets. Automated the structural harmonization of ledger outputs into intuitive analytics matrices mapping risk themes, age bands, and trends for Vice President (VP) review workflows.

SDE Intern | [Karplexus Pvt. Ltd.](#) (FinTech) – Developed a cloud-native Role-Based Access Control (RBAC) system and User Management interface using React and TypeScript, single-handedly delivering 10+ core product surfaces.

Freelance Software Developer | [Big 3 Interactive Inc.](#) – Upgraded high-throughput remote admin consoles utilizing FFmpeg for automated video optimization/encoding and built stateful Discord orchestration services.

PUBLICATIONS/CONFERENCES

Presented 4 peer-reviewed academic research papers with 3 citations in the fields of systems engineering, cloud computing and blockchain in reputed international conferences and published in IEEE Xplore, IED Proceedings and API Proceedings.
